

Ceramic Food Packaging

A warm welcome, as warm as the materials we use. We adapt our designs and proposals to your specific needs.

CERMER
Ceramic Food Packaging

WELCOME TO CERMER

“If it’s really premium,
it comes in ceramics”

That’s our CERMER motto, a claim that sums up in a few words how a food container can enhance the consumer experience. Or rather, a container that is an experience on its own. The sound of a spoon scraping the inside of our containers is the sound of quality and enjoyment.

Our containers are an eco-friendly and long-lasting packaging option made of natural, inert, non-polluting clay. Our ceramic ware is a 100% reusable packaging solution and is oven, microwave, freezer and dishwasher safe.

**More than a container,
a communication tool**

The greatest potential of our ceramic containers is differentiation, a powerful branding tool that enhances the consumer experience.

Agility and long-lasting relationships based on trust

After more than 35 years, we have continuously pioneered advancements, fostering an unparalleled level of respect and passion for ceramics and nature. We have developed our own Heat-Sealing Technology for Ceramics and we have two independent production facilities with a 150M pcs production capacity ensuring quality and timely delivery.

We comply with the strictest European and US regulations:

OnetoOne system

Our engineering team will assist you at each stage of the adoption process. We study the technical feasibility of our clients’ request and give technical advice to find the right match to launch the product. Switching to ceramics will be a pleasant evolution!

Since its establishment in 1988, CERMER has emerged as the global leader in innovation and production capacity, setting the standard in the world of ceramic containers for the food industry.

As natural as
Mother Earth

Ceramics have enormous
transformational potential

Recycling ceramics is a simple, cheap and non-polluting process. Ceramic waste can be used for other purposes such as bricks, roads, or even tennis courts.

Inertness

CERMER’s ceramic food containers are made from natural, inert and non-polluting materials: clay (95%), food-safe and non-toxic glazes (5%).

Abundant raw material

Clay is an abundant raw material that naturally exists in the environment. We work with natural clays, which are easy to extract from open-cast quarries that are then later transformed into wetlands.

Reusing has never been so exciting

Ensure less waste by adopting ceramic food packaging

Thanks to the various options for use during their life cycle, CERMER containers help to reduce the generation of packaging waste.

95%* of European consumers reuse CERMER containers

According to a study by market research agency 40dB in 2021, 95% of European consumers reuse ceramic containers as kitchenware and tableware”

Favor reusing over recycling: Packaging, Kitchenware and Tableware all in one

CERMER containers are conceived, designed, and manufactured to serve three purposes throughout their long-life span. After their first use as packaging, they become your everyday tableware and kitchenware to prepare delicious home-made recipes.
